

Steps to Install GlassFish Server & NetBeans 7.3.1 on Ubuntu Linux 12.04/12.10/13.04

1. Ubuntu Linux will need to install Oracle JDK 7 not OpenJDK7. Oracle JDK 7 can be set up on Ubuntu with the following 3 commands (on your desktop or laptop):

```
sudo add-apt-repository ppa:webupd8team/java
sudo apt-get update
sudo apt-get install oracle-java7-installer
```

2. Go to the NetBeans home page at www.netbeans.org
3. Select *NetBeans IDE* tab near the top.
4. Click the orange *Download* button near the top of the next page.
5. Download the *Java EE* bundle for Linux.
6. In a terminal, navigate to the directory where the shell script was download and execute it with the command `sh ./netbeans7-7.3.1-javaee-linux.sh`
7. Make sure GlassFish server is selected and that a JRE is automatically detected. Click next.
8. Select the agreement terms for both products and for JUnit.
9. Choose the location to install both the GF server and the IDE, and then install them both.
10. GlassFish server should automatically configure itself, register itself in the IDE, and provide you with a default domain. You can check that it is registered in NetBeans by going to Tools > Servers.
