Instructions

• Write your name and version number on the top of the yellow paper.
• Answer all questions on the yellow paper.
• One question per page.
• Use only one side of the yellow paper.

1. (16 Points) Multiple Choice:

A. (2 Points) If x is a variable of type int, what is the largest possible value of the expression (x % 5)?
   a. 1  
   b. 4 
   c. 5 
   d. $2^{31}-1$

B. (2 Points) How many constructors can a class have?
   a. Exactly one  
   b. At least one, but no more than three  
   c. Exactly the same as the number of data members  
   d. There is no restriction on the number of constructors

C. (2 Points) In the following list: John, Kate, Fred, Mark, Jon, Adam, Drew. Which element is the head of the list?
   a. John  
   b. Mark 
   c. Drew 
   d. Adam

D. (2 Points) The definition of a subclass includes a(n) _____ clause to indicate its superclass.
   a. super  
   b. extends 
   c. this  
   d. implements

E. (2 Points) Which of the following statements deletes the first node of a linear linked list that has 10 nodes?
   a. head.setNext(cur.getNext()); 
   b. prev.setNext(cur.getNext()); 
   c. head = head.getNext(); 
   d. head = null;

F. (2 Points) If the array: {6, 2, 7, 13, 5, 4} is added to a stack, in the order given, which number will be the first number to be removed from the stack?
   a. 6 
   b. 2 
   c. 5 
   d. 4

G. (2 Points) last-in, first-out (LIFO) property is found in the ADT _____.
   a. list  
   b. stack 
   c. queue 
   d. tree

H. (2 Points) The enqueue operation of the ADT queue is similar to the _____ operation of the ADT stack.
   a. isEmpty  
   b. peek 
   c. push 
   d. pop
2. (20 Points) Given the following QueueInterface:

```java
public interface QueueInterface {
    public void enqueue(Object obj);
    public Object dequeue();
    public Object peek();
}
```

And given the following LinkedQueue that implements QueueInterface as a doubly-linked queue:

```java
public class Node {
    private Object object;
    private Node next;
    private Node previous;
    public Node(Object object) {
        this.object = object;
        this.next = null;
        this.previous = null;
    }
    public Object getObject() {
        return this.object;
    }
    public Node getNext() {
        return this.next;
    }
    public void setNext(Node next) {
        this.next = next;
    }
    public Node getPrevious() {
        return this.previous;
    }
    public void setPrevious(Node previous) {
        this.previous = previous;
    }
}
```

```java
public class LinkedQueue implements StackInterface {
    private front = null, back = null;
    @Override
    public void enqueue(Object obj) {
        Node newNode = null;
        if (this.back == null) {
            this.front = newNode;
        } else {
            this.back.setNext(newNode);
            newNode.setPrevious(this.back);
            this.back = this.front;
        }
    }
    @Override
    public void dequeue() {
        Object obj = null;
        if (this.front != null) {
            obj = this.front.getObject();
            this.front = this.front.getPrevious();
        }
        if (front != null) {
            this.front.setPrevious(null);
        } else {
            this.back = null;
        }
    }
    @Override
    public Object peek() {
        Object obj = null;
        if (this.front != null) {
            obj = this.front.getNext();
        }
        return obj;
    }
}
```

Re-write the LinkedQueue class and fix the 10 syntax and logical errors.
3. (40 Points) Given the following StackInterface:

```java
import java.util.Vector;

public interface StackInterface {
    // returns true if Queue is empty
    // returns false otherwise
    public boolean isEmpty();

    // returns the size of the Queue
    public int size();

    // pushed the specified Object
    // onto the stack
    public void push(Object obj);

    // pops and returns the Object
    // at the top of the stack
    public Object pop();

    // tests if this Stack is equal to the
    // Stack specified by oStack
    // Two Stacks are equal if they have
    // the same size and all their elements
    // are equal
    public boolean equals(Object oStack);

    // returns a Vector containing all the
    // elements in the Stack
    public Vector<Object> peekAll();
}
```

Write the complete Java class for the array-based ArrayStack that implements the given StackInterface. You may use the Vector instead of an array in your class if you wish.
4. (30 Points) Given the following SortInterface:

```java
public interface SortInterface {
    public void sort(Integer[] arrayToSort);
}
```

Write the BubbleSort class that implements the given SortInterface using the Bubble Sort Algorithm.
Instructions

• Write your name and version number on the top of the yellow paper.
• Answer all questions on the yellow paper.
• One question per page.
• Use only one side of the yellow paper.

1. (16 Points) Multiple Choice:

A. (2 Points) If s1 is of type String, what does s1.compareTo(s1) return?
   a. zero
   b. true
   c. false
   d. Cannot be determined without knowing the value of s1

B. (2 Points) What does it mean for the return type of a method to be void?
   a. The method will never return a value
   b. The method will return the value zero
   c. The method does not take parameters
   d. The method does not have a body

C. (2 Points) In the following list:
   John, Kate, Fred, Mark, Jon, Adam, Drew.
   Which element is the tail of the list?
   a. John
   b. Mark
   c. Drew
   d. Adam

D. (2 Points) In Java, a class can extend _____.
   a. At most 1 class
   b. At most 16 classes
   c. At most 32 classes
   d. As many classes as required

E. (2 Points) Which of the following statements deletes the node that cur references?
   a. prev.setNext(cur);
   b. cur.setNext(prev);
   c. cur.setNext(cur.getNext());
   d. prev.setNext(cur.getNext());

F. (2 Points) If the array: {6, 21, 35, 3, 6, 2, 13} is added to a stack, in the order given, which of the following is the top of the stack?
   a. 2
   b. 6
   c. 3
   d. 13
   e. 35

G. (2 Points) first-in, first-out (FIFO) property is found in the ADT _____.
   e. list
   f. stack
   g. queue
   h. tree

H. (2 Points) The pop operation of the ADT stack is similar to the ____ operation of the ADT queue.
   a. isEmpty
   b. enqueue
   c. dequeue
   d. peek
2. **(20 Points)** Given the following StackInterface:

```java
public interface StackInterface {
    public void push(Object obj);
    public Object pop();
    public Object peek();
}
```

And given the following LinkedStack that implements StackInterface as a doubly-linked stack:

```java
public class Node {
    private Object object;
    private Node next;
    private Node previous;

    public Node(Object object) {
        this.object = object;
        this.next = null;
        this.previous = null;
    }

    public Object getObject() {
        return this.object;
    }

    public Node getNext() {
        return this.next;
    }

    public void setNext(Node next) {
        this.next = next;
    }

    public Node getPrevious() {
        return this.previous;
    }

    public void setPrevious(Node previous) {
        this.previous = previous;
    }
}
```

```java
public class LinkedStack implements QueueInterface {
    private Node top = null;

    @Override
    public void push(Object obj) {
        Node newNode = null;
        if (this.top != null) {
            this.top = newNode;
        } else {
            newNode.setPrevious(this.top);
            this.top.setPrevious(newNode);
            this.top = this.top.getPrevious();
        }
    }

    @Override
    public void pop() {
        Object obj = null;
        if (this.top != null) {
            obj = this.top.getPrevious();
            this.top = this.top.getNext();
        } else {
            this.top.setPrevious(null);
        }
    }

    @Override
    public Object peek() {
        Object obj = null;
        if (this.top != null) {
            obj = this.top.getObject();
        }
    }
}
```

Re-write the LinkedStack class and fix the 10 syntax and logical errors.
3. **(40 Points)** Given the following QueueInterface:

```java
import java.util.Vector;

public interface QueueInterface {
    // returns true if Queue is empty
    // returns false otherwise
    public boolean isEmpty();

    // returns the size of the Queue
    public int size();

    // adds the specified Object
    // to the Queue
    public void enqueue(Object obj);

    // removes and returns the front
    // of the Queue
    public Object dequeue();

    // tests if Queue is equal to the
    // Queue specified by oQueue
    // Two Queues are equal if they have
    // the same size and all their elements
    // are equal
    public boolean equals(Object oQueue);

    // returns a Vector containing all the
    // elements in the Queue
    public Vector<Object> peekAll();
}
```

Write the complete Java class for the array-based ArrayQueue that implements the given QueueInterface. You may use the Vector instead of an array in your class if you wish.
4. (30 Points) Given the following SortInterface:

```java
public interface SortInterface {
    public void sort(Integer[] arrayToSort);
}
```

Write the InsertionSort class that implements the given SortInterface using the Insertion Sort Algorithm.
Instructions
• Write your name and version number on the top of the yellow paper.
• Answer all questions on the yellow paper.
• One question per page.
• Use only one side of the yellow paper.

1. (16 Points) Multiple Choice:

A. (2 Points) If we wanted to write an if-statement that executes whenever the real number x is between 10.0 and 20.0, how should the test condition be written?

- a. $10.0 < x \land x > 20.0$
- b. $10.0 < x \land x < 20.0$
- c. $10.0 < x \land x > 20.0$
- d. $10.0 < x \lor x < 20.0$

B. (2 Points) The communication mechanisms among modules are called _____.

- a. algorithms
- b. solutions
- c. prototypes
- d. interfaces

C. (2 Points) In a sorted array, the kth smallest item is given by _____.

- a. anArray[k-1]
- b. anArray[k]
- c. anArray[SIZE-k]
- d. anArray[SIZE+k]

D. (2 Points) In the ADT list, when an item is inserted into position i of the list, _____.

- a. the position of all items is increased by 1
- b. the position of each item that was at a position smaller than i is increased by 1
- c. the position of each item that was at a position greater than i is increased by 1
- d. the position of each item that was at a position smaller than i is decreased by 1 while the position of each item that was at a position greater than i is increased by 1

E. (2 Points) Which of the following statements deletes the first node of a linear linked list that has 10 nodes?

- a. head.setNext(curr.getNext());
- b. prev.setNext(curr.getNext());
- c. head = head.getNext();
- d. head = null;

F. (2 Points) If the string w is a palindrome, which of the following is true?

- a. w minus its first character is a palindrome
- b. w minus its last character is a palindrome
- c. w minus its first and last characters is a palindrome
- d. the first half of w is a palindrome
- e. the second half of w is a palindrome

G. (2 Points) If the array: {6, 2, 7, 13, 5, 4} is added to a queue, in the order given, which number will be the first number to be removed from the queue?

- a. 6
- b. 2
- c. 5
- d. 4

H. (2 Points) Operations on a queue can be carried out at _____.

- a. its front only
- b. its back only
- c. both its front and back
- d. any position in the queue
2. **(20 Points)** Given the following QueueInterface:

```java
generic interface QueueInterface {  
    public void enqueue(Object obj);  
    public Object dequeue();  
    public Object peek();  
}
```

And given the following array-based ArrayQueue that implements QueueInterface:

```java
import java.util.Vector;

public ArrayQueue implements StackInterface {

    private Vector<Integer> queueVector = new Vector<Object>;

    @Override  
    public void enqueue(Object obj) {
        queueVector.addElement(0, obj);
    }

    @Override  
    public void dequeue() {
        Object obj = null;
        if (queueVector.size() <= 0) {
            obj = queueVector.elementAt(0);
            queueVector.remove(0);
        }
    }

    @Override  
    public Object peek() {
        Integer obj = null;
        if (queueVector.size() > 0) {
            obj = queueVector.elementAt(0);
        }
    }
}
```

Re-write the ArrayQueue class and fix the 10 syntax and logical errors.
3. (40 Points) Given the following StackInterface and Node implementation:

```java
import java.util.Vector;

public interface StackInterface {
    // returns true if Queue is empty
    // returns false otherwise
    public boolean isEmpty();

    // returns the size of the Queue
    public int size();

    // pushed the specified Object
    // onto the stack
    public void push(Object obj);

    // pops and returns the Object
    // at the top of the stack
    public Object pop();

    // tests if this Stack is equal to the
    // Stack specified by oStack
    // Two Stacks are equal if they have
    // the same size and all their elements
    // are equal
    public boolean equals(Object oStack);

    // returns a Vector containing all the
    // elements in the Stack
    public Vector<Object> peekAll();
}
```

```java
public class Node {
    private Object object;
    private Node next;

    public Node(Object object) {
        this.object = object;
        this.next = null;
    }

    public Node getNext() {
        return next;
    }

    public void setNext(Node next) {
        this.next = next;
    }

    public Object getObject() {
        return object;
    }
}
```

Write the complete Java class for the reference-based LinkedStack that implements the given StackInterface.
4. (30 Points) Given the following SortInterface:

```java
public interface SortInterface {
    public void sort(Integer[] arrayToSort);
}
```

Write the SelectionSort class that implements the given SortInterface using the Selection Sort Algorithm.
