

Version 1

Instructions

- Write your name and version number on the top of the yellow paper.
- Answer all questions on the yellow paper.
- One question per page.
- Use only one side of the yellow paper.

1. (16 Points) Multiple Choice:

A. (2 Points) Which of the following loop headers will arrange for the loop body to execute exactly 10 times?

- a. `for (int i = 1; i < 10; ++i)`
- b. `for (int i = 0; i <= 10; ++i)`
- c. `for (int i = -5; i < 5; ++i)`
- d. `for (int i = 2; i < 20; ++i)`

B. (2 Points) Which access modifier, used when defining a method, indicates that only one such method is available for all instances of the class?

- a. `final`
- b. `private`
- c. `protected`
- d. `static`

C. (2 Points) Which of the following is an example of a syntax error?

- a. a program encounters an instruction to divide by zero
- b. an array subscript in a program goes out of range
- c. `the beginning of a while loop is written as "whille" instead of "while"`
- d. an algorithm that calculates the monthly payment of a loan displays incorrect results

D. (2 Points) Data structures are part of an ADT's

_____.

- a. definition
- b. `implementation`
- c. specifications
- d. usage

E. (2 Points) In the following list:

`John, Kate, Fred, Mark, Jon, Adam, Drew`
which element does not have a predecessor?

- a. `John`
- b. `Mark`
- c. `Drew`
- d. `Adam`

F. (2 Points) If the array: {6, 2, 7, 13, 5, 4} is added to a stack, in the order given, which number will be the first number to be removed from the stack?

- a. 6
- b. 2
- c. 5
- d. 4

G. (2 Points) The last node of a linear linked list

_____.

- a. has the value null
- b. `has a next reference whose value is null`
- c. has a next reference which references the first node of the list
- d. cannot store any data

H. (2 Points) Which of the following statements deletes the node that curr references?

I.

- a. `prev.setNext(curr);`
- b. `curr.setNext(prev);`
- c. `curr.setNext(curr.getNext());`
- d. `prev.setNext(curr.getNext());`

Version 1

2. (20 Points) Given the following generic MyArray class:

```
public class MyArray<I> {

    private I[] array = (I[]) new Object[100];
    private int currentLocation = 0;

    public void addElement(I element) {
        array[currentLocation++] = element;
    }

    public void replaceElement(I newElement, int index) {
        if ((index >= currentLocation) ||
            ((index < 0) || (index > array.length))) {
            System.out.println("Error");
        }
        array[index] = newElement;
    }

    public void removeElement(int index) {
        if (((index >= currentLocation) && (index < array.length)) ||
            ((index < 0) || (index > array.length))) {
            System.out.println("Error");
        }
        for (int i = index + 1 ; i < currentLocation ; i++) {
            array[i-1] = array[i];
        }
        array[--currentLocation] = null;
    }

    public void clear() {
        for (int i = 0 ; i < array.length ; i++) {
            array[i] = null;
        }
        currentLocation = 0;
    }

    public int numberofElements() {
        return currentLocation;
    }
}
```

Version 1

3. (40 Points) The correct generic LinkedQueue Implementation is:

```

import java.util.Vector;

public class LinkedQueue<I> implements
    QueueInterface<I> {

    private Node<I> front = null, back = null;
    private int size = 0;

    @Override
    public boolean isEmpty() {
        return (front == null);
    }

    @Override
    public int size() {
        return this.size;
    }

    @Override
    public void enqueue(I element) {
        Node<I> newNode = new Node<I>(element);
        if (back == null) {
            front = newNode;
        } else {
            back.setNext(newNode);
        }
        back = newNode;
        this.size++;
    }

    @Override
    public I dequeue() {
        I element = null;
        if (front != null) {
            element = front.getElement();
            front = front.getNext();
            this.size--;
        }
        if (front == null) {
            back = null;
        }
        return element;
    }

    @Override
    public boolean equals(Object oQueue) {
        boolean answer = false;
        LinkedQueue<I> otherQueue;

        if (oQueue instanceof LinkedQueue) {
            otherQueue = (LinkedQueue<I>) oQueue;
        } else {
            return answer;
        }

        Vector<I> myPV = this.peekAll();
        answer = myPV.equals(otherQueue.peekAll());

        return answer;
    }

    @Override
    public Vector<I> peekAll() {
        Vector<I> pv = new Vector<I>();
        Node<I> curNode = this.front;

        while (curNode != null) {
            pv.add(curNode.getElement());
            curNode = curNode.getNext();
        }

        return pv;
    }
}

```

Version 2

Instructions

- Write your name and version number on the top of the yellow paper.
- Answer all questions on the yellow paper.
- One question per page.
- Use only one side of the yellow paper.

1. (16 Points) Multiple Choice:

A. (2 Points) The Java expression $9 / 5 + 9 \% 5$ equals ____.

- a. 0
- b. 1
- c. 3
- d. 5**
- e. 6

B. (2 Points) Consider the following code that appears in a test class.

```
A a = new A();
int c = a.b;
```

In order for this code to work, which statement must be true?

- a. a must be declared public inside class A
- b. b must be declared public inside class A**
- c. c must be declared public inside class A
- d. Method b() must return int

C. (2 Points) The syntax errors of a program are removed during the ____ phase of the program's life cycle

- a. verification
- b. coding**
- c. testing
- d. refining
- e. maintenance

D. (2 Points) An ADT's ____ govern(s) what its operations are and what they do.

- a. specifications**
- b. implementation
- c. documentation
- d. data structure

E. (2 Points) In the following list:

John, Kate, Fred, Mark, Jon, Adam, Drew
which element does not have a successor?

- a. John
- b. Mark
- c. Drew**
- d. Adam

F. (2 Points) If the array: {6, 21, 35, 3, 6, 2, 13} is added to a stack, in the order given, which of the following is the top of the stack?

- a. 2
- b. 6
- c. 3
- d. 13**
- e. 35

G. (2 Points) Which of the following will be true when the reference variable curr references the last node in a linear linked list?

- a. curr == null
- b. head == null
- c. curr.getNext() == null**
- d. head.getNext() == null

H. (2 Points) Which of the following statements deletes the first node of a linear linked list that has 10 nodes?

- a. head.setNext(curr.getNext());
- b. prev.setNext(curr.getNext());
- c. head = head.getNext();**
- d. head = null;

Version 2

2. (20 Points) Given the following generic MyArray class:

```
public class MyArray<I> {

    private I[] array = (I[]) new Object[100];
    private int currentLocation = 0;

    public void addElement(I element) {
        array[currentLocation++] = element;
    }

    public void replaceElement(I newElement, int index) {
        if ((index >= currentLocation) ||
            ((index < 0) || (index > array.length))) {
            System.out.println("Error");
        }
        array[index] = newElement;
    }

    public void removeElement(int index) {
        if (((index >= currentLocation) && (index < array.length)) ||
            ((index < 0) || (index > array.length))) {
            System.out.println("Error");
        }
        for (int i = index + 1 ; i < currentLocation ; i++) {
            array[i-1] = array[i];
        }
        array[--currentLocation] = null;
    }

    public void clear() {
        for (int i = 0 ; i < array.length ; i++) {
            array[i] = null;
        }
        currentLocation = 0;
    }

    public int numberofElements() {
        return currentLocation;
    }
}
```

Version 2

3. (40 Points) The correct generic LinkedStack implementation is:

```

import java.util.Vector;

public class LinkedStack<I> implements
StackInterface<I> {

    private Node<I> stackPtr = null;
    int size = 0;

    @Override
    public boolean isEmpty() {
        return (stackPtr == null);
    }

    @Override
    public int size() {
        return this.size;
    }

    @Override
    public void push(I element) {
        Node<I> newNode = new Node<I>(element);
        if (stackPtr == null) {
            stackPtr = newNode;
        } else {
            newNode.setNext(stackPtr);
            stackPtr = newNode;
        }
        this.size++;
    }

    @Override
    public I pop() {
        I element = null;
        if (stackPtr != null) {
            element = stackPtr.getElement();
            stackPtr = stackPtr.getNext();
        }
        this.size--;
        return element;
    }

    @Override
    public boolean equals(Object oStack) {
        boolean answer = false;
        LinkedStack<I> otherStack;

        if (oStack instanceof LinkedStack) {
            otherStack = (LinkedStack<I>) oStack;
        } else {
            return answer;
        }

        Vector<I> myPV = this.peekAll();
        answer = myPV.equals(otherStack.peekAll());

        return answer;
    }

    @Override
    public Vector<I> peekAll() {
        Vector<I> pv = new Vector<I>();
        Node<I> curNode = this.stackPtr;

        while (curNode != null) {
            pv.add(curNode.getElement());
            curNode = curNode.getNext();
        }

        return pv;
    }
}

```
